

FAIR principle	FIP questionnaire		Leiden DMP template		
	FIP question	FER type	question	answer	comment
F1	What globally unique, persistent, resolvable identifiers do you use for metadata records?	identifier service			
F1	What globally unique, persistent, resolvable identifiers do you use for datasets?	identifier service	If archiving in a data archive or repository, does it provide a persistent identifier (PID)?		
F2	Which metadata schemas do you use for findability?	metadata schema	What standard will you use to describe your data?		
				a) I have a discipline-specific metadata standard	
				b) archival metadata standard	
F3	What is the technology that links the persistent identifiers of your data to the metadata description?	metadata-data linking schema	How is your metadata linked to data?		
				f) using a schema that links the persistent identifiers of my data to the metadata description	
F4	Which service do you use to publish your datasets?	registry			
F4	Which service do you use to publish your datasets?	registry	Where will you store your data during your research? / Which of the following will you use for long-term findability and availability of your data?		
A2	What metadata preservation policy do you use?	metadata preservation policy	How long should your metadata be preserved?		new question added
I2	What knowledge representation language (allowing machine interoperation) do you use for datasets?	knowledge representation language	What file formats (allowing machine interoperation) do you use for your datasets?		
R1.1	What usage license do you use for your datasets?	data usage license	What license will you apply to your data?
